Information Technology Specialist in Systems Development and AI

Summary

Systems and application specialist and developer, specialized in Artificial Intelligence technologies, systems administration, and operations. Possesses practical experience in designing, developing, and optimizing software systems and applications, analyzing technical requirements, and transforming them into effective and scalable solutions. Demonstrates strong expertise in monitoring system performance, diagnosing technical issues, and resolving faults efficiently to ensure system stability and continuous service availability.

Contributes to the development of internal processes and systems using modern software development methodologies and well-structured system architectures, while leveraging Artificial Intelligence technologies to enhance performance, automate processes, and improve user experience. Also has experience in systems administration and working with operating environments that require high levels of reliability and security, with a strong focus on software quality and maintainability.

Education

October 2025

Banking Technical Support & Artificial Intelligence Programs

- Artificial Intelligence in the Banking Sector (Python and Object-Oriented Programming)
- Artificial Intelligence and Deep Machine Learning
- Generative Artificial Intelligence
- ITIL Reference Library Program

June 2024

Bachelor's Degree in Information Technology (English Program) | University of Science and Technology | Sana'a, Yemen

- Distinguished Member of the University's Information Technology Association
- GPA: 92.51

2020-2019

Advanced English Language | Mali Institute for Languages | Taiz

- Professional speaking, writing, and conversation

Professional Experience

February 8, 2026 – Present

Applications Developer, AI Systems Developer | Tharawat Financial Services and Investment Company | Sana'a, Yemen

- **As an Applications Developer**
  - Develop, maintain, and enhance the Simsim Store application ecosystem, including the Customer App, Merchant App, and Delivery App.
  - Redevelop and optimize applications comprehensively in terms of performance, user experience, and software architecture, contributing to improved product quality and stability.
  - Design and develop modern, responsive user interfaces using Flutter, with a focus on usability and enhancing the user experience.
  - Integrate applications with backend systems and REST APIs, connecting them efficiently with various services.
  - Implement and develop AI-powered services and integrate them into applications to provide intelligent features and improve the user experience.
  - Manage application releases and periodic updates, ensuring readiness for deployment and publishing.
  - Collaborate with design, management, and development teams to align technical solutions with business goals.

- **As an AI Systems Developer**
  - Study and evaluate opportunities to implement Artificial Intelligence technologies within the company's products and digital services.
  - Design and develop AI-based solutions to improve the user experience and increase operational efficiency.
  - Integrate AI services and models into the company's applications to provide intelligent features and expand product capabilities.
  - Develop Proof of Concept (PoC) models and evaluate emerging AI technologies to assess their technical and commercial feasibility.
  - Contribute to defining the company's technical vision for building an Artificial Intelligence platform that supports existing products and creates new investment opportunities.
  - Continuously research emerging technologies in Generative Artificial Intelligence, AI agents, and intelligent automation.
  - Design and develop intelligent workflows, integrating various systems with AI services to improve productivity and accelerate operational processes.
  - Provide technical consultation on selecting and implementing Artificial Intelligence technologies in alignment with the company's objectives and long-term strategic vision.
  - Evaluate the infrastructure and technical requirements necessary for adopting Artificial Intelligence solutions at the enterprise level.

May 1, 2025 – Present

Systems Specialist, Systems & Artificial Intelligence Developer | Yemen Commercial Bank | Sana'a, Yemen

- **As a Systems Specialist / Systems Administrator**
  - Manage, operate, and monitor the banking and operational systems used by the bank, ensuring their continuous and efficient operation across the Head Office and all branches.
  - Supervise various banking systems, including money transfer systems, customer management systems, electronic archiving, daily treasury systems, asset management systems, and international funds transfer systems.
  - Provide advanced technical support to users by troubleshooting operational and technical issues, analyzing system failures, and implementing the necessary corrective actions to ensure uninterrupted banking services.
  - Coordinate with different departments and branches to understand operational requirements and optimize system performance in line with business needs.
  - Manage and track technical support tickets, ensuring timely resolution while minimizing their impact on banking operations.
  - Communicate and coordinate directly with international technology vendors and banking solution providers to resolve technical issues and oversee system enhancements and updates.
  - Supervise the implementation and testing of new system releases and updates, ensuring compliance with the bank's requirements and approved policies.
  - Participate in projects aimed at developing and enhancing banking systems and operational processes to improve operational efficiency and service quality.
  - Prepare technical and operational reports on system performance and provide recommendations to enhance system stability and operational efficiency.
  - Ensure the implementation of best practices in systems administration, information security, and business continuity.

- **As an Artificial Intelligence Systems Developer**
  - Design and develop intelligent automation bots to accelerate routine banking operations, reduce manual effort, and improve execution speed and accuracy.
  - Develop Retrieval-Augmented Generation (RAG) systems to enhance information retrieval and support decision-making within the bank.
  - Automate core operational and administrative processes to increase efficiency and reduce operational risks.
  - Design and implement a centralized Data Warehouse to consolidate data from the bank's systems, enabling advanced analytics and improving reporting accuracy.
  - Integrate HashiCorp Vault for secure secrets management, access key protection, and secure communication between microservices within the bank's technology infrastructure.
- **As a Systems & Mobile Applications Developer**
  - Contribute to the development and enhancement of the Tejari One banking application by integrating it with the bank's core banking systems and digital services while improving the overall user experience.
  - Lead the analysis, design, and development of the bank's Internet Banking System (IBS), enabling corporate and institutional customers to manage their bank accounts and perform a wide range of financial transactions and banking services electronically. Build the required integrations with internal banking systems and implement industry best practices for security and reliability to deliver a modern, secure, and robust digital banking platform.

January 2, 2024 – August 18, 2025

Systems Developer | Together Information Technology Solutions | Sana'a, Yemen

- Contributed to the design, development, and integration of multiple information systems, with a focus on scalable and secure architectures.
- Built and optimized RESTful APIs and microservices using Django and Python to enable seamless data exchange between enterprise systems and external applications.
- Documented technical processes and provided support in troubleshooting and resolving issues, enhancing team collaboration and ensuring system reliability under tight project deadlines.

2023 – 2024

Technician & Developer | Student Performance Reporting System | University of Science and Technology | Sana'a, Yemen

- Developed a Django-based system for processing student performance data using Artificial Intelligence and generating analytical reports, integrating Machine Learning models to improve accuracy.
- Collaborated with the development team to resolve technical issues while ensuring reliable system performance and data integrity.
- Documented technical processes to support team training and facilitate ongoing system maintenance.

Projects

- **Web Application Development (Frontend + Backend)**
  - **Corporate Internet Banking System (Corporate IBS) | Yemen Commercial Bank | Sana'a, Yemen**

    Led the analysis, design, and development of the bank's Corporate Internet Banking System (IBS), enabling corporate and institutional clients to manage their bank accounts and perform a wide range of banking transactions and financial services online. Built the required integrations with internal banking systems while implementing industry best practices for security, reliability, and performance to deliver a modern digital banking platform.

    - **Technologies Used:**
      - **Backend:**
        - **.NET 8 (ASP.NET Core Web API)**
        - **Clean Architecture**
        - **Modular Monolith**
      - **Frontend:**
        - **React 18**
        - **TypeScript**
        - **Vite**

  - **Helpdesk / Ticketing System | Together Information Technology Solutions**

    Developed a comprehensive web-based technical support management system that enables users to submit and track support requests through intuitive interfaces and well-structured workflows.
    The system allows administrators to manage all support tickets, assign them to staff members, monitor progress, and ensure efficient issue resolution. It also supports sending tickets and their resolutions via email in a card-based format to simplify communication and follow-up.

    - **Technologies Used:**
      - **Backend:**
        - **Django**
      - **Frontend:**
        - **HTML**
        - **CSS**
        - **JavaScript**
        - **Tailwind CSS**
        - **React**

  - **Student Examination Committee Distribution & Seat Number Management System | Together Information Technology Solutions**

    Developed a web application for managing and organizing student distribution across examination committees, including automated generation and management of seat numbers and classroom assignments with accuracy and efficiency.
    The system utilizes a customized Django Admin interface as a practical front-end solution, providing simplified administration, faster data entry, and reduced administrative errors.

    - **Technologies Used:**
      - **Backend:**
        - **Django**
      - **Frontend:**
        - **Django Admin (Customized Admin Interface)**

- **Smart Traffic Management System | Innovation Challenge Project – Yemen Commercial Bank**
  Developed an intelligent web-based traffic management and monitoring system that analyzes urban traffic conditions and provides recommendations and decision-support solutions for traffic officers and road users using integrated Artificial Intelligence technologies.
  The system features professional dashboards and integrates with mapping services to visualize congestion hotspots, identify traffic conditions, and recommend optimal routes and traffic management solutions
  - **Technologies Used:**
    - **Backend:**
      - **Django**
    - **Frontend:**
      - **HTML**
      - **CSS**
      - **JavaScript**
      - **Tailwind CSS**
- **Abu Meska Construction Company Portfolio Website | Abu Meska Construction Company**
  Developed a fully bilingual (Arabic/English) corporate website for Abu Meska Construction Company, showcasing the company's profile and projects in infrastructure, construction, water well drilling, and renewable energy, with integrated automated email communication.
  - **Technologies Used:**
    - **Frontend:**
      - **React 19**
      - **Vite**
      - **Tailwind CSS**
      - **Framer Motion**
      - **Three.js**

- **ERP System Administration & Customization**
  - **Odoo ERP Customization for NGO-Funded Field Project Management | Yemen Commercial Bank**
    Customized and implemented an Odoo ERP solution for managing field projects funded by international organizations and executed through Yemen Commercial Bank.
    The implementation included module configuration, workflow customization, and report development to monitor project execution, financial disbursements, and coordination between implementing partners and funding organizations.
    - **Technologies Used:**
      - **Backend:**
        - **Odoo Custom Framework**
        - **Python**
      - **Frontend:**
        - **JavaScript**
        - **OWL (Odoo Web Library)**
        - **QWeb Templates**

- **Mobile Application Development (Flutter + ASP.NET)**
  - **Weldan – Internal E-Commerce Marketplace | Abu Meska Trading Company**
    Developed an internal e-commerce marketplace application that enables users to browse products, place orders, and complete purchases within an enterprise environment connecting internal suppliers across the city.
    The platform includes product, order, and user management features, along with integration of digital wallet payments to simplify financial transactions. The mobile application was developed using Flutter, while the backend services were built with ASP.NET.
    - **Technologies Used:**
      - **Backend:**
        - **ASP.NET**
      - **Frontend:**
        - **Flutter**

- **Smsm Ecosystem | Tharawat Financial Services and Investment Company**
  Developed and enhanced the Smsm Ecosystem, a comprehensive e-commerce and logistics platform consisting of three interconnected mobile applications: the Customer App, Merchant App, and Delivery App. The ecosystem is designed to manage the entire order lifecycle, from product browsing and order placement to inventory and business operations management, as well as delivery execution and real-time order tracking.
- **Technologies Used:**
  - **Backend:**
    - **Laravel**
  - **Frontend:**
    - **Flutter**
- **Tijari One | Yemen Commercial Bank**
  Contributed to the development and enhancement of the Tijari One digital banking application, providing customers with a comprehensive platform for managing bank accounts, performing fund transfers and payments, and accessing digital banking services. Participated in implementing new features, improving application performance, and integrating the application with the bank's core banking systems.
- **Technologies Used:**
  - **Backend:**
    - **ASP.Net**
  - **Frontend:**
    - **Flutter**

Technical Skills & Professional Training

- **Backend Systems Development**
  - Advanced backend development following SOLID principles and Clean Architecture (MVC).
  - Design and development of RESTful APIs and real-time communication protocols, including SignalR, SOAP, and UDP/TCP.
- **Enterprise Systems & Infrastructure**
  - Design and implementation of high-availability infrastructure using Windows Server 2022, CentOS 8, Ubuntu, and virtualization platforms such as VMware vSphere and Microsoft Hyper-V.
  - Administration and implementation of Active Directory, Microsoft Exchange, FTP services, and enterprise storage solutions.
  - Configuration of Nginx load balancing, 3CX telephony solutions, and scalable server environments.
- **Enterprise Systems & Infrastructure**
  - Design and implementation of high-availability infrastructure using Windows Server 2022, CentOS 8, Ubuntu, and virtualization platforms such as VMware vSphere and Microsoft Hyper-V.
  - Administration and implementation of Active Directory, Microsoft Exchange, FTP services, and enterprise storage solutions.
  - Configuration of Nginx load balancing, 3CX telephony solutions, and scalable server environments.
- **Cloud Computing & DevOps**
  - Hands-on experience with cloud platforms including Google Cloud Platform (GCP), Microsoft Azure, and Heroku.
  - Containerization and orchestration using Docker, Kubernetes, and OpenShift OKD.
  - Agile project management and CI/CD pipeline implementation using Azure DevOps, Jira, and version control systems.
- **Artificial Intelligence & Data Science**
  - Applying Machine Learning, Deep Learning, and Neural Networks for data analysis and intelligent decision-making.
  - Data engineering and algorithm development to support predictive analytics, financial forecasting, and risk management.

Cisco Networking Academy

Certificate of Course Completion

CCNAv7: Introduction to Networks

The student has successfully achieved student level credential for completing CCNAv7: Introduction to Networks course administered by the undersigned instructor. The student was able to proficiently:

- Configure switches and end devices to provide access to local and remote network resources.
- Explain how physical and data link layer protocols support the operation of Ethernet in a switched network.
- Configure routers to enable end-to-end connectivity between remote devices.
- Create IPv4 and IPv6 addressing schemes and verify network connectivity between devices
- Explain how the upper layers of the OSI model support network applications.
- Configure a small network with security best practices.
- Troubleshoot connectivity in a small network.
